

1           **WHAT IS CLAIMED IS:**

- 2           1. A method of using high temperature to disintegrate titanyl  
3 phthalocyanine (TiOPc) comprises acts of:  
4           heating a mixture of titanyl phthalocyanine and a vitrifying material  
5 with high temperature plasma to a temperature of 1,220°C to 10,000°C until the  
6 mixture becomes a molten lava; and  
7           cooling the molten lava until the lava solidifies.  
8           2. The method as claim in claim 1, wherein the mixture has a glass to  
9 TiOPc ratio of 17:3.  
10          3. The method as claimed in claim 2, wherein the temperature is  
11 preferred to be 1,220°C to 1,456°C.  
12          4. The method as claimed in claim 1, wherein the mixture further  
13 comprises soil.  
14          5. The method as claimed in claim 4, wherein the mixture has a glass to  
15 soil to TiOPc ratio of 7:10:3.  
16          6. The method as claimed in claim 5, wherein the temperature is  
17 preferred to be 1,220°C to 1,456°C.
